VEC-483K Vectronics Voice Activated Recorder Switch Kit

£24.95

DESCRIPTION

The VEC-483K Electronic Kit lets you remotely and automatically record conversations, speeches and other presentations. It lets you record for longer periods by not recording silence and wasting tape. You simply plug it into the remote jack of a tape recorder and it is activated when it hears speech. The self-contained unit has a built-in microphone and an on/off switch. The kit requires a 9 volt battery (not included).

Skill Level: Simple -- Calls for a few basic tools. It doesn't require test equipment for final adjustment or tuning.

Note: This is merely the kit. If you would like to purchase a case for your electronic kit as well, you will need to purchase it separately.
