CHA TACHAT SPOKE £44.95

DESCRIPTION

The CHA TACHAT will double & triple the band width of the typical ham stick, depending on the band.

Without a doubt, the single most important purchase you'll ever make is the antenna. Mono-band antennas like ham sticks, work about as good or slightly better than a short stubby screwdriver - but without help, their bandwidth is annoyingly narrow, particularly on the lower bands. This can be a disruptive issue if you change frequencies often, as operators typically do. While the ham stick type antenna has some negatives, as any antenna will, the pluses outweigh the minuses. The price point of the ham stick antenna makes them compelling. Mono-band Mobile Whips, or HAM STICK Whips, make HF mobile or portable operating fun and easy! They're small, lightweight, efficient, and super-easy to use. Their sleek, low-profile construction, has low wind loading, and their semi-rigid fiberglass construction eliminates the need for springs or guys.

HAM STICKS will handle 250-500 watts PEP and measure around 7 ft. when fully extended, and 4 ft. collapsed. They will screw into any 3/8-24" female mount for quick band-changing! And are available for 10, 15, 17, 20, 30, 40, and 75 meters.

The CHA TACHAT is available in two models: Spoke and Loop.

Spoke version : Model: CHA-TACHAT-S, consists of a 36"

whip, 6 x 36" rods, and the TACHAT Hub.

Loop version : Model: CHA-TACHAT-L, consists of a 36" whip, 3 x 36" rods/loops, and the TACHAT Hub.
